Our Success Stories

Amine ARIFI

During my end-of-studies internship at TELNET, I had the privilege of working on a project that bridged DevOps and network engineering, allowing me to strengthen my technical expertise and gain valuable hands-on experience in a collaborative environment. This internship was a turning point in my career, leading to my current position as a Manual QA Network Engineer at TELNET.

Today, I focus on testing and validating Home Gateway solutions, ensuring their quality, performance, and reliability. TELNET continues to provide me with an inspiring environment that fosters growth, innovation, and technical excellence.

Ons MESSAOUD

My experience at TELNET has been truly enriching and transformative. During my end-of-studies internship, I had the opportunity to work on a very innovative project that involved cutting-edge technologies in the field of Artificial Intelligence. This experience allowed me to develop strong technical skills, gain new knowledge, and explore the exciting world of AI. I was also very fortunate to be well supervised — my professional mentor was always available whenever I needed support or guidance. I really appreciated the availability, encouragement, and teamwork spirit within the TELNET group. Thanks to this positive experience, I was very motivated to continue my journey with TELNET in a full-time position, where I now face new challenges and contribute to new projects. I am committed to continuing to grow and to always live up to the trust the company has placed in me.

How to Apply

Scan the QR code to access our PFE Book and discover available topics!

Send your application by email to our recruitment team:

- **Subject line:** Include the number of your selected topic(s)
- **Email body:** Write a short motivation letter explaining your interest
- **Attachment:** Don't forget to include your CV

 **17** **Deadline: December 25th, 2025**

Take the first step towards an exciting internship with TELNET!
