OVERVIEW

EdTrust is an EdTech startup committed to transforming the way private schools manage their daily operations. We provide a complete digital solution that simplifies administrative tasks, enhances communication between schools and parents, and improves the overall educational experience for students and teachers.

At EdTrust, our mission is to empower educational institutions with smart, reliable, and scalable tools that make learning more efficient and accessible.

01

Innovative Projects

Join a startup that is reshaping the EdTech sector with modern, data-driven tools. At EdTrust, you work on real challenges that impact schools, teachers, and thousands of students, allowing you to contribute to meaningful digital transformation

02

Opportunities for Growth

EdTrust offers a learning environment where you can develop your technical and professional skills quickly. You will be guided, challenged, and exposed to new technologies, giving you strong career progression and hands-on experience.

03

Real Impact on the Market

Every task you perform at EdTrust has direct value for our clients. You are not just completing assignments, you are building features, solving real problems, and improving the daily life of educational institutions.

INTERNSHIP AT EDTRUST

At EdTrust, you will find a space where you could develop your skills, enrich your knowledge and get support for experienced individuals

**Guidance and mentorship from
experienced team members**

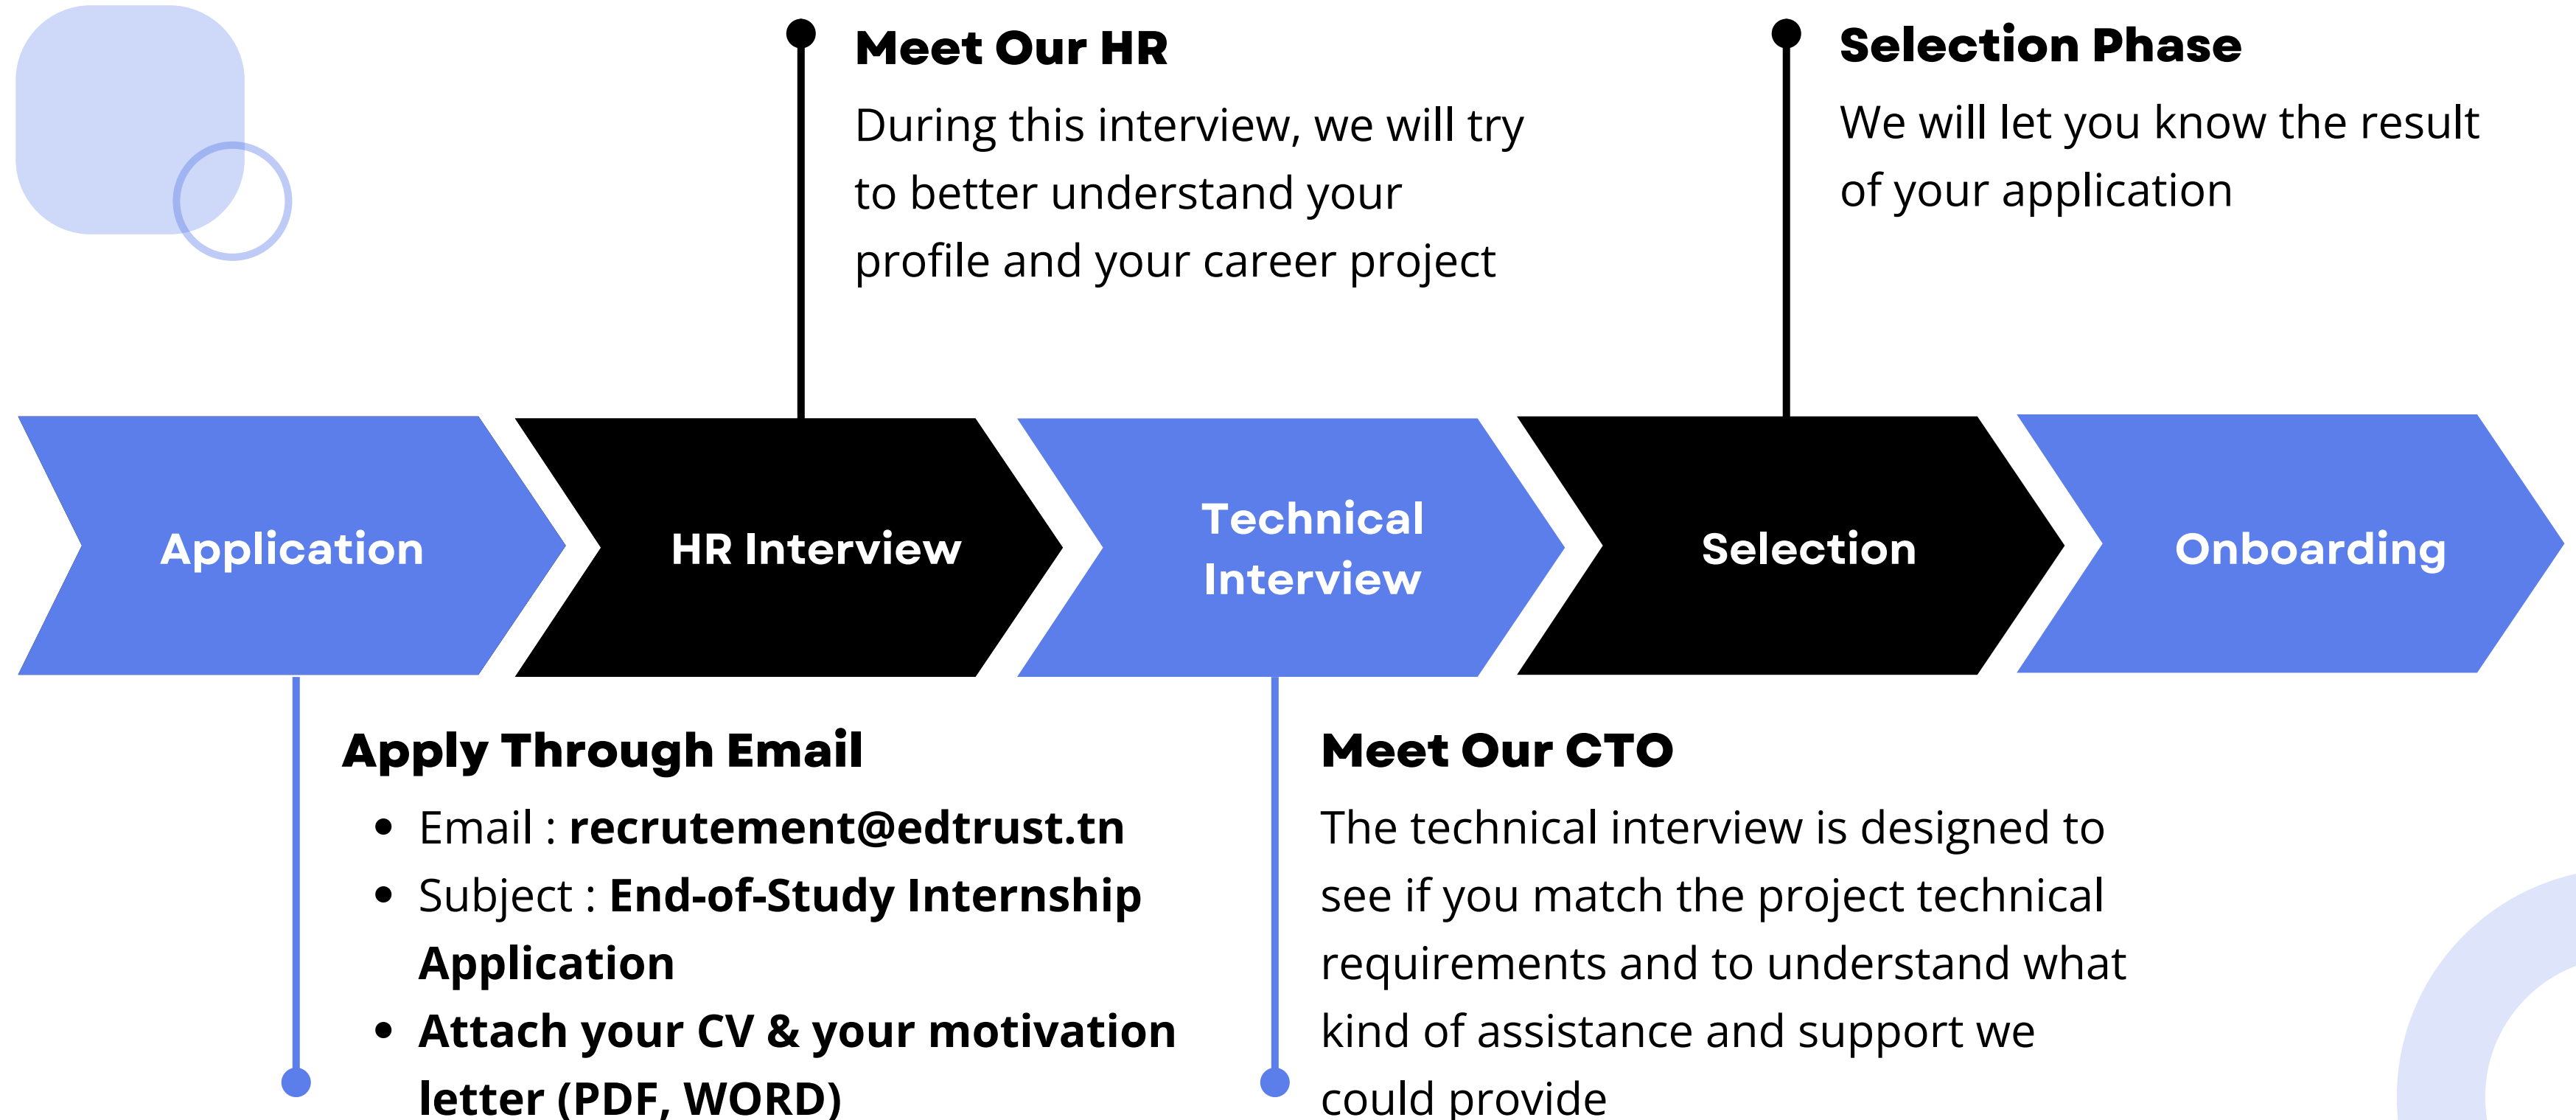

**A collaborative and supportive work
environment**

Support and regular follow-up

Learning advanced technologies

**Possibility of recruitment after
internship**

SELECTION PROCESS

END OF STUDY PROJECT

This end-of-study internship offers final-year students the opportunity to work on a real-world project focused on automating financial operations within the EdTech sector. Interns will contribute to the development of an advanced financial management and recovery system that integrates business logic, automation workflows, cloud services, and full-stack development. The project provides hands-on experience with modern technologies, industry practices, and real operational challenges.

Goals

The goal of this internship project is to build an automated financial system capable of managing subscriptions, trials, installments, and payment plans. It aims to streamline the recovery process by tracking due dates, sending automated reminders, and enforcing service suspension when necessary. The project also focuses on generating financial documents and deploying the entire solution using modern cloud and CI/CD tools.

- Number of interns : **2 Interns**
- Internship duration : **4 to 6 Months**

Key Features

The system includes automated workflows for financial operations, an intelligent recovery engine, and integrated AWS SNS notifications for email and SMS delivery. It supports automatic suspension of unpaid accounts, dynamic PDF generation for invoices and receipts, and a full deployment pipeline using GitHub Actions and AWS.

Technologies

NodeJS

Express.js

MongoDB

Vue.js

AWS

Github Actions
