**ELIXIA**

YOUR SMART HEALTHCARE PARTNER

# 1. About ELIXIA

**ELIXIA Your  
Smart Healthcare Partner.**

ELIXIA's mission is to enable healthcare stakeholders to fully benefit from the power of artificial intelligence through a strong vision, continuous innovation, and uncompromising quality.

## 2. Who we are

ELIXIA is a pioneering healthcare AI startup focused on bridging the gap between cutting-edge technology and practical medical application.

### **AI-Driven**

Advanced algorithms powering decisions.

### **Scalable**

Solutions that grow with your practice.

### **Secure**

Enterprise-grade data protection.

### **Impactful**

Innovation that matters.

### 3. Our Ecosystem

A comprehensive suite of tools designed to modernize every aspect of the healthcare journey.

#### **GOPRO**

Advanced CRM+ tailored specifically for the pharmaceutical industry

#### **VEROX**

The smart box connecting pharmacies to the digital ecosystem.

#### **AIVIA**

Intelligent support assistant empowering doctors with data.

#### **BIOCELL VISION**

Next-generation analytics for laboratory precision.

## 4. How to apply?

The steps to follow to join our team as an intern:

---

### Step 1

Choose a project, scan the QR code, and fill out the form.

---

### Step 2

Selected candidates will be contacted for an individual meeting.

---

### Step 3

Each candidate will receive a response detailing the next steps.

---

### Step 4

For selected candidates, a great adventure begins.

---

# Project 1 : GOPRO

---

## Overview

A unified project combining **DevOps automation** and a **React Native UI library** to improve application delivery and standardize user experience.

## DevOps

- CI/CD pipeline automation
- Secure and standardized environments
- Faster, reliable deployments

## UI/UX (React Native)

- Reusable UI component library
- Consistent design system
- Optimized performance

## Key Benefits

- Reduced human errors
- Faster time-to-market
- Improved visual quality and team productivity

# Project 2 : BIOCELL VISION

---

## Overview

An advanced laboratory analytics platform leveraging **artificial intelligence** to enhance medical analysis from microscope images, improve reporting accuracy, and accelerate laboratory workflows.

## Development (DEV)

Modern and intuitive user interface

Seamless integration with laboratory systems

Secure and scalable application architecture

## Artificial Intelligence (AI)

AI/ML models for medical microscope image analysis

Consistent design system to interact with AI models and generate interpretable outputs

Optimized performance and reliability through **MLOps** pipelines (training, deployment, monitoring)

## Key Benefits

Reduced human errors in medical analysis

Faster laboratory reports and diagnostics

Improved analysis quality and team productivity

# Project 3 : ELIXIA – Learning & Digital Services Platform

---

## **Overview**

A unified platform combining **online learning** and **digital services**, designed to empower users through knowledge, product discovery, and centralized access to solutions.

## **Learning Module**

E-learning platform similar to Udemy

Structured courses and learning paths

Progress tracking and performance monitoring

## **Services Module**

Service showcases and interactive demonstrations

Free trial access

Centralized entry point to all ELIXIA digital solutions

## **Key Benefits**

Increased visibility and adoption of services

Enhanced user autonomy and engagement

Unified and seamless user experience

# Project 4 : AVIA-DOC & AVIA-CARE

---

## **Overview**

AVIA is a platform that connects patients and healthcare providers with AI-powered decision support.

## **Development (DEV)**

Modern, responsive interfaces

Smooth navigation and user flows

Cross-platform compatibility (iOS & Android)

## **UI/UX Design**

Consistent and visually appealing design system

Reusable components for faster development

Optimized user experience and performance

## **Key Benefits**

Enhanced user engagement and satisfaction

Faster development and deployment cycles

High-quality, scalable mobile application

# Project 5: Classification of baby cry by Machine Learning

---

## OVERVIEW

Babies mainly communicate through crying. Each type of cry can express a specific need such as hunger, pain, tiredness, or discomfort. For many parents, especially new ones, it is difficult to correctly understand these signals.

**ARTIFICIAL INTELLIGENCE (AI)** The AI part of this project focuses on applying machine learning and deep learning algorithms

Data Collection, Preprocessing, Feature Extraction, Model Training, Evaluation, Interface Development
